Description

The 17B5 monoclonal antibody reacts with mouse CD137, also known as 4-1BB, a member of the TNFR superfamily. CD137 is expressed as monomers, dimers, and tetramers on the surface of activated T cells around day 4-6 after activation through the TCR complex. Interaction of CD137 with its ligand, 4-1BBL, is reported to deliver a costimulatory signal important in the T-APC interaction. Unpublished data suggest that 17B5 has strong agonistic effect in in vitro functional assays.

Usage

For research use only, not for diagnostic or therapeutic use. The 17B5 antibody has been reported for use in flow cytometric analysis.

Applications Tested

The 17B5 antibody has been tested by flow cytometric analysis of activated mouse splenocyte cultures. This can be used at less than or equal to 0.5 µg per million cells in a 100 µl total staining volume. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
