Description

The mCD30.1 monoclonal antibody reacts with mouse CD30, a 105-120 kDa member of the TNFR superfamily. CD30 is not detectable on splenocytes, but can be upregulated on T cells stimulated *in vitro* through TCR with a peak expression around day 4-5 post-activation. CD30 is expressed by both CD8⁺ and CD4⁺ activated cells. It is suggested that CD30 regulates cytokine secretion by T cells and has a role in T cell development.

Usage

For research use only, not for diagnostic or therapeutic use. The mCD30.1 antibody has been reported for use in flow cytometric analysis. It has also been reported in *in vitro* functional studies. (Please use Functional Grade purified mCD30.1, cat. 16-0301, in functional assays.)

Applications Tested

The mCD30.1 antibody has been tested by flow cytometric analysis of resting and activated mouse splenocyte suspensions. This can be used at less than or equal to 0.5 μg per million cells in a 100 μl total staining volume. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
