

Fibronectin (Cellular) antibody [Fn-3]

Alternate names:	MLF-1
Catalog No.:	15-288-22394B
Quantity:	0.1 mg
Concentration:	1 mg/ml
Background:	Fibronectin is a glycoprotein present in a soluble dimeric form in plasma, and in a dimeric or multimeric form at the cell surface and in extracellular matrix. Fibronectin is involved in cell adhesion and migration processes including embryogenesis, wound healing, blood coagulation, host defense, and metastasis. The gene has three regions subject to alternative splicing, with the potential to produce 20 different transcript variants. However, the full-length nature of some variants has not been determined.
Host / Isotype:	Chicken
Immunogen:	Cell preparation: fR5 cells (SV40 transformed human mammary epithelial cells).
Format:	State: Liquid Purification: Protein A purified Buffer System: Preservative: 0.1% Sodium Azide. Constituents: PBS. pH 7.2
Applications:	IF, IHC-Fr, IP Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.
Specificity:	Human - Not yet tested in other species
Storage:	Keep as concentrated solution. Store at 4

For research and in vitro use only. Not for diagnostic or therapeutic work.

Material Safety Datasheets are available at www.acris-antibodies.com or on request.
