

Product Information

Contents: Functional Grade Purified anti-human TWEAK

Catalog Number: 16-9915

Sizes: 100 ug

Formulation: Phosphate buffer pH 7.2,
500 mM NaCl, No NaN₃

Storage Conditions: Store at 4°C.

Avoid repeated freeze/thaw cycles.

KEEP CONTENT STERILE.

Endotoxin Level: Less than 0.001 ng/ug antibody, as determined by the LAL assay.

Clone: CARL-1

Isotype: Mouse IgG3, κ

Available Formats of This Product

Cat. No.	Format	Excite (nm)	Emit (nm)	Reported Applications
12-9915	PE anti-human TWEAK	488	575	FC
13-9915	Biotin anti-human TWEAK	N/A	N/A	ELISA det FC
14-9915	Affinity Purified anti-human TWEAK	N/A	N/A	FA FC
16-9915	Functional Grade* Purified anti-human TWEAK	N/A	N/A	FA FC

*Functional Grade™ (FG™): Azide-free, sterile-filtered, and endotoxin < 0.001 ng/μg.

Purified: Contains azide, not sterile-filtered, and not endotoxin tested.

Description

The CARL-1 monoclonal antibody reacts with human TWEAK, a type II transmembrane TNF superfamily member with high identity to TNF in its extracellular portion. TWEAK transcript is expressed broadly in many adult and fetal tissues, however, the staining of human peripheral blood mononuclear cells with monoclonal antibodies shows a more restricted pattern. While freshly isolated PBMCs do not express detectable levels of TWEAK on their surface, IFN-γ-stimulated blood monocytes rapidly upregulate TWEAK surface expression. TWEAK is expressed as membrane bound and secreted forms. Interaction of TWEAK with its counter-receptor promotes secretion of IL-8, activation of NF-κB, proliferation of endothelial cells, and apoptosis in a number of human cell lines. Initially, DR3 was thought to be a receptor for TWEAK, but further studies have shown that TWEAK could induce apoptosis via receptors distinct from DR3. While TWEAK exhibits overlapping signaling functions to TNF, it is generally less effective in inducing apoptosis, giving rise to its name, TNF-like weak inducer of apoptosis. For detection of human TWEAK by sandwich ELISA, a combination of purified CARL-2 for capture and biotinylated CARL-1 for detection is recommended.

Usage

For research use only, not for diagnostic or therapeutic use. The CARL-1 antibody has been reported for use in flow cytometric analysis. It has also been reported in blocking of TWEAK-induced cell death in functional studies.

Applications Tested

The CARL-1 antibody has been tested by flow cytometric analysis of transfected cells and IFN-γ-stimulated human PBMCs. This can be used at less than or equal to 1 μg per 100 μl blood (or per 1 million cells in 100 μl total staining volume). It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
