

AM33466PU-N**Monoclonal Antibody to Respiratory Syncytial Virus / RSV (Fusion protein) - Purified**

Quantity:	1 mg
Concentration:	5.89 mg/ml (OD280nm, E0.1%=1.36)
Background:	Respiratory syncytial virus (RSV) is a major cause of respiratory illness in young children. RSV infection produces a variety of signs and symptoms involving different areas of the respiratory tract, from the nose to the lungs. RSV is a negative sense, enveloped RNA virus. The virion is variable in shape and size with average diameter of between 120 and 300 nm. The 63 kD RSV fusion protein of the RSS 2 strain (subtype A) directs fusion of viral and cellular membranes, results in viral penetration, and can direct fusion of infected cells with adjoining cells, resulting in the formation of syncytia or multi nucleated giant cells.
Host / Isotype:	Mouse / IgG2b
Recommended Isotype Controls:	SM12P, AM03110PU-N
Clone:	B326M
Immunogen:	RSV Strains 127, SNK & 9007, Long, Randall, 8/60 and A/2
Format:	State: Liquid purified Ig fraction (>90% pure by SDS-PAGE) Purification: Protein A Chromatography Buffer System: PBS, pH 7.4 Preservatives: 15mM Sodium Azide
Applications:	ELISA. Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.
Specificity:	This antibody recognizes RSV fusion protein (46 kDa and 22 kDa disulphide-linked glycoprotein).
Storage:	Store undiluted at 2-8°C. DO NOT FREEZE! Shelf life: one year from despatch.
