Human Neuregulin 1 (beta-1 Isoform) - Purified Acetylcholine receptor-inducing activity, Breast cancer cell differentiation factor p45, GGF, Alternate names: Glial growth factor, HGL, HRG, HRGA, Heregulin, NDF, NRG1, Neu differentiation factor, Proneuregulin-1 membrane-bound isoform, SMDF, Sensory and motor neuron-derived factor AR01011PU-N **Catalog No.: Quantity:** 50 µg **Background:** Neuregulin/Heregulin is a family of structurally related polypeptide growth factors derived from alternatively spliced genes (NRG1, NRG2, NRG3 and NRG4). To date, there are over 14 soluble and transmembrane proteins derived from the NRG1 gene. Proteolytic processing of the extracellular domain of the transmembrane NRG1 isoforms release soluble growth factors. HRG1-β1 contains an Ig domain and an EGF-like domain that is necessary for direct binding to receptor tyrosine kinases erb3 and erb4. This binding induces erb3 and erb4 heterodimerization with erb2, stimulating intrinsic kinase activity, which leads to tyrosine phosphorylation. Although HRG1-β1 biological effects is still unclear, it has been found to promote motility and invasiveness of breast cancer cells which may also involve upregulation of expression and function of the autocrine motility-promoting factor (AMF). **Uniprot ID:** Q02297 NCBI: NP 001153467.1 **GenelD:** 3084 **Species:** Human Source: E. coli Format: **State:** Sterile filtered, lyophilized, containing no additives Purity: >98% > 98% by SDS-PAGE gel and HPLC analyses **Endotoxin Level:** < 0.1 ng per μ g (1EU/ μ g). **Reconstitution:** Centrifuge the vial prior to opening. Restore in water to a concentration of 0.1-1.0 mg/ml. This solution can then be diluted into other aqueous buffers and stored at 4°C for one week or at -20°C for future use. **Description:** Recombinant human Heregulin- β 1 (HRG1- β 1) is a polypeptide consisting of only the EGF domain of heregulin-B1 (65 amino acid residues). AA Sequence: SHLVKCAEKE KTFCVNGGEC FMVKDLSNPS RYLCKCPNEF TGDRCQNYVM ASFYKHLGIE FMEAE **Biological Activity:** The ED50 aas determined by the dose-dependent stimulation of the proliferation of human MCF-7 cells is $\langle \rangle = 0.5$ ng/ml. **Specific Activity:** > / =2 x 10e6 units/mg Molecular weight: 7.5 kDa

AR01011PU-N: Human Neuregulin 1 (beta-1 Isoform) - Purified

Storage:	The lyophilized protein is stable at -20°C for one year from date of despatch. Reconstituted Heregulin- β 1 is stable for 3 months when stored in working aliguots with a
	carrier protein at -20°C. Avoid repeated freezing and thawing.
