Human Pyridoxal kinase / PDXK (1-312, His-tag) - Purified

Alternate names:

C21orf124, C21orf97, PKH, PNK, PRED79, Pyridoxine kinase

Quantity:

50 µg

Concentration:

1.0 mg/ml (determined by Bradford assay)

Background:

PDXK converts vitamin B6 to pyridoxal-5-phosphate (PLP), an essential cofactor in the intermediate metabolism of amino acids and neurotransmitters. The encoded protein is cytoplasmic and probably acts as a homodimer. Alternatively spliced transcript variants have been described, but their biological validity has not been determined.
