

Mouse Leptin Triple Antagonist - Purified

Catalog No.:	AR10428PU-N
Quantity:	0.1 mg
Concentration:	0.65 mg/ml (prior to lyophil.)
Species:	Mouse
Source:	E. coli
Format:	State: White lyophilized (freeze-dried) powder Purity: > 99.0% as determined by both Gel filtration and SDS-PAGE analysis. Purification Method: Proprietary chromatographic techniques. Buffer System: Lyophilized from a concentrated (0.65 mg/ml) solution with 0.003mM NaHCO ₃ Reconstitution: Restore in sterile water or sterile 0.4% NaHCO ₃ adjusted to pH 8-9, not less than 100 µg/ml, which can then be further diluted with other aqueous solutions.
Description:	Recombinant Mouse Leptin Antagonist Triple Mutant is a single non-glycosylated polypeptide chain containing 146 amino and additional <i>Ala</i> at N-terminus acids and having a Molecular Mass of ~ 16 kDa, LEP was mutated, resulting in L39A/D40A/F41A mutant. Protein content: Protein quantization was carried out by UV spectroscopy at 280 nm using the absorbency value of 0.21 as the extinction coefficient for a 0.1% (1mg/ml) solution at pH 8.0. This value is calculated by the PC GENE computer analysis program of protein sequences (IntelliGenetics). AA Sequence: The sequence of the first five N-terminal amino acids was determined and was found to be <i>Ala-Val-Pro-Ile-Gln</i> Biological Activity: Capable of inhibiting Leptin-induced proliferation of BAF/3 cells stably transfected with the long form of Human Leptin Receptor. It also inhibits various Leptin effects in several <i>in vitro</i> bioassays.
Storage:	Prior to reconstitution store at 2-8°C for one month or desiccated below -18°C. Following reconstitution (at > 0.1 mg/ml and up to 2 mM and filter sterilization) store undiluted at 2-8°C or at RT for one month making it suitable for long term infusion studies using osmotic pumps. At lower concentration addition of a carrier protein (0.1% HSA or BSA) is suggested. Avoid repeated freezing and thawing. Shelf life: one year from despatch.
