Cytomegalovirus Pp28 - Purified

Catalog No.: AR10514PU-L

Quantity: 1 mg

Concentration: 1.0 mg/ml

Background: CMV belongs to the Betaherpesvirinae subfamily of Herpesviridae which includes herpes

simplex virustypes 1 and 2, varicella-zoster virus, and Epstein-Barrvirus. The herpesviruses share a characteristic ability to remain latentover long periods. CMV is a double-stranded linear DNA virus with 162 hexagonal protein capsomeres surrounded by a lipid membrane. CMV has the largest genome of the herpes viruses, ranging from 230-240 kilobase pairs. Human CMV is composed of unique and inverted repeats that include the existence of 4 genome isomers caused by inversion of L-S genome components (class E). Replication may be divided into immediate early, delayed early, and late gene expression based on time of synthesis after infection. The DNA is replicated by rolling circles. In vitro, CMV replicates in

human fibroblasts.

Source: E. coli

Format: Purity: >95% pure as determined by 10% PAGE (coomassie staining).

Purification Method: Sepharose-Derived Purification.

Buffer System: 25mM Tris-HCl pH 7.2, 1mM EDTA, 50% Glycerol

Applications: Antigen in ELISA and Western blots, excellent antigen for detection of CMV with minimal

specificity problems.

Other applications not tested. Optimal dilutions are dependent on conditions and should

be determined by the user.

Description: E.coli derived recombinant. The protein contains the CMV Pp28 (UL99) immunodominant

regions.

Specificity: Immunoreactive with sera of CMV-infected individuals.

Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing. Shelf life: one year from despatch.
