Dengue Virus Polyvalent type 1-4 - Purified

Catalog No.: AR10521PU-N

Quantity: 0.5 mg

Concentration: 0.79 mg/ml

Background: Caused by one of four closely related virus serotypes of the genus Flavivirus, family

Flaviviridae, each serotype is sufficiently different that there is no cross-protection and epidemics caused by multiple serotypes (hyperendemicity) can occur. In cell culture experiments and mice Morpholino antisense oligos have shown specific activity against

Dengue virus.

Source: E. coli

Format: Purity: >95% pure as determined by 10% PAGE (coomassie staining).

Purification Method: Purified by proprietary chromatographic technique.

Buffer System: PBS, pH 7.4

Description: Polyvalent Dengue antigen is a 22kDa protein that contains 4 Dengue antigen subtypes,

produced in *E.coli* and fused to a 6xHis Tag.

The immunoreactive peptide span from the viral envelope to the non-functional region. The polyvalent Dengue antigen consists of 25% recombinant antigen from each of the Dengue

subtypes in their composition.

The Polyvalent Dengue antigen detects all four dengue subtypes.

The sensitivity and specificity could reach approximately 93% and 96% in Dengue IgG and

IgM ELISA assay.

Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing. Shelf life: one year from despatch.
