# Yeast Thioredoxin - Purified

Catalog No.: AR10713PU-N

**Quantity:** 20 μg

Background: Thioredoxins are small disulphide-containing redox proteins (within the conserved Cys-Gly-

Pro-Cys active site) that have been found in all the kingdoms of living organisms. Thioredoxin contains a single disulfide active site and serves as a general protein disulphide oxidoreductase. Thioredoxins are involved in the first unique step in DNA synthesis. It interacts with a broad range of proteins by a redox mechanism based on reversible oxidation of two cysteine thiol groups to a disulphide, accompanied by the transfer of two electrons and two protons. The net result is the covalent interconversion of a disulphide and a dithiol. It has been suggested that thioredoxin may catalyze the formation of correct disulfides during protein folding because of its ability to act as an efficient oxidoreductant. Trx also provides control over a number of transcription factors affecting cell proliferation and death through a mechanism referred to as redox regulation.

Species: Yeast
Source: E. coli

Format: State: Lyophilized sterile purified protein

**Purity:** > 95.0% as determined by:

(a) Analysis by RP-HPLC.(b) Anion-exchange FPLC.

(c) Analysis by reducing and non-reducing SDS-PAGE Silver Stained. **Buffer System:** Each mg of protein contains 20mM Phosphate buffer pH 7.4

**Reconstitution:** Restore in sterile  $18M\Omega$ -cm<sup>-1</sup> H<sub>2</sub>O

**Description:** Recombinant Yeast Thioredoxin produced in *E.coli* is a single, non-glycosylated,

polypeptide chain having a Molecular Mass of 12.6kDa

Biological Activity: Yeast Recombinant TRX is fully biologically active when compared to

standard.

TRX activity is assayed by measuring the change in absorbance at 650 nm at 25°C using

0.13µM Bovine Insulin containing 0.33mM DTT (pH 6.5)

Specific Activity: 3IU/mg

Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing. Shelf life: one year from despatch.
