Human VPS24 (1-222, His-tag) - Purified

Alternate names:

CGI-149, CHMP3, Charged multivesicular body protein 3, Chromatin-modifying protein 3, NEDF, Neuroendocrine differentiation factor, Vacuolar protein-sorting-associated protein 24

Quantity:

0.5 mg

Concentration:

1.0 mg/ml (determined by Bradford assay)

Background:

VPS24, also known as Charged multivesicular body protein 3 (CHMP3), belongs to the vacuolar sorting protein family and function as chromatin modifying proteins. It associates directly with CHMP2 and CHMP4 for the disassembly of ESCRT-III complex in an ATP-dependent manner. During HIV-1 infection, the virus uses the ESCRT-III complex to mediate budding and exocytosis of viral proteins. Overexpression of VPS24 strongly inhibits HIV-1 release.
