Human KLF4 (11-395, His-Cam-tag) - Purified

Alternate names:	EZF, Epithelial zinc finger protein EZF, GKL, Gut-enriched krueppel-like factor, Krueppel-like factor 4
Quantity:	0.25 mg
Concentration:	1.0 mg/ml (determined by Bradford assay)
Background:	KLF4 is a transcription factor which acts as both an activator and repressor. This protein is expressed principally in erythroid tissues and found predominantly in gut. KLF4 is involved in the differentiation of epithelial cells and may also function in skeletal and kidney development.
