

AR51249PU-N

Human MTCP1 (1-68, His-tag) - Purified

Alternate names:	C6.1B, MTCP-1 type A, Mature T-cell proliferation-1 type A, Protein p8 MTCP-1, p8MTCP1
Quantity:	0.5 mg
Concentration:	0.5 mg/ml (determined by Bradford assay)
Background:	CMC4 was identified by involvement in some t(X;14) translocations associated with mature T-cell proliferations. This region has a complex gene structure, with a common promoter and 5 exon spliced to two different sets of 3 exons that encode two different proteins. This gene represents the downstream 8 kDa protein that localizes to mitochondria.
