

AR52058PU-S**Human TPST1 (26-370, His-tag) - Purified**

Alternate names:	Protein-tyrosine sulfotransferase 1, TPST-1, Tyrosylprotein sulfotransferase-1
Quantity:	20 µg
Concentration:	0.25 mg/ml (determined by absorbance at 280nm)
Background:	TPST1, also known as protein-tyrosine sulfotransferase 1, is the enzyme that catalyzes the sulfation reaction of protein tyrosines, a post-translational modification of proteins. It utilizes 3'-Phosphoadenosine-5'-phosphosulfate (PAPS) as the sulfate donor and binds proteins with target tyrosine residues to eventually form the tyrosine O-sulfate ester group and the desulfated 3'-phosphoadenosine-5'-phosphate (PAP). Recombinant human TPST1, fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
