

**DA3556****Porcine FGF acidic / FGF1 (Cell Culture Grade) - Extract****Alternate names:**

Acidic fibroblast growth factor, Beta-endothelial cell growth factor, ECGF-beta, FGFA, HBGF-1, HBGF1, Heparin-binding growth factor 1

**Quantity:**

6 mg

**Background:**

Endothelial cell growth factor (ECGF) is an extract of porcine brain containing growth promoting factors for vascular endothelial cells of mammalian origin. ECGF has also been reported to be beneficial as a media supplement for the fusion and growth of hybridoma cells in monoclonal antibody production. Endothelial cell growth factor is prepared using a modification of the method of Maciag, et al. (1979) lyophilized from a sterile solution containing NaCl and streptomycin sulfate. Endothelial cells from human umbilical vein (HUVEC) can be established as primary cultures by traditional methods. The serial propagation of these cells has proved to be difficult. The long-term propagation of these cells in vitro can be achieved with an extract prepared from bovine brain. The introduction of a fibronectin or collagen matrix to the cell culture system allows to cultivate endothelial cells at clonal densities. With ECGF, the FCS requirement can be reduced. Heparin potentiates the mitogenic activity of crude preparations of ECGF. ECGF has also been reported to eliminate the need for feeder cells in the clonal growth of hybridomas and other cell types.

**Uniprot ID:**

[P20002](#)

**NCBI:**

[9823](#)

**Species:**

Porcine

**Source:**

Brain

**Format:**

**State:** Lyophilized (Sterile Freeze dried) Crude extract

**Buffer System:** H2O without preservatives

**Reconstitution:** Restore the contents of the vial in 2 ml of prewarmed (37°C) sterile balanced salt solution.

Gently rotate the vial until the contents are dissolved. This stock solution may be further diluted in sterile tissue culture media to obtain the desired working concentrations. Although the stock solution can be added aseptically to sterile tissue culture medium, it is recommended that medium containing diluted product is aseptically filtered prior to use.

**6 mg of ECGF are sufficient for 500 ml medium.**

**Applications:**

Porcine ECGF is effective on Mouse, Bovine, Porcine and Human cells. Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.

**Description:**

Porcine Endothelial Cell Growth Factor (ECGF) (Cell Culture Grade).

**Biological Activity:** Optimum concentration for human umbilical vein endothelial cells (HUVEC) range from 50-200 µg/ml, optimal concentration with heparin (50 µg/ml) is about 12 µg/ml.

- Storage:** Store lyophilized at 2-8°C for 6 months or at -20°C long term.  
After reconstitution store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C long term.  
Avoid repeated freezing and thawing.  
Shelf life: one year from despatch.

- Protocols:**
- plate cells with a density at 5-7 x 10<sup>3</sup> cells/well in growth medium (EGM)
  - incubate cells over night [if urgent, plate cells in the morning, change growth medium against basal medium (EBM) in the early afternoon]
  - change EGF against EBM (for HUVEC: EBM +1-2% FCS)
  - incubate 24h - change medium again and add factors (growth factors, inhibitors, etc)
  - incubate for 18h - add 10µl 3H-Thymidine solution [0.025mCi/ml] per well (=0.25µCi)
  - incubate another 6h at 37°C
  - Washing steps: (250µl/well)
  - PBS 1x
  - MeOH 2x 5min
  - TCA 2x 10min
  - H2O 1x
  - lyse cells in 250µl 0.3M NaOH per well
  - transfer 2.5 ml ECO Plus into the appropriate scintillation vials
  - transfer cell lysats into the scintillation vials - count by liquid scintillation (beta-counter; Beckmann Instruments)

**Pictures:**

Proliferation assay with primary HUVECs. Serum-starved HUVECs (2% FCS) were stimulated with increasing amounts of porcine ECGF. Human VEGF165 and FGF-2 (basic FGF) were used as positive controls.
