

DA3558S

Recombinant Human Interleukin-1 beta / IL-1B

Alternate names:

Catabolin, IL-1 beta, IL1 beta, IL1B, IL1F2

Quantity:

2 µg

Background:

Interleukin-1 beta (IL-1beta) is produced by activated macrophages. IL-1beta stimulates thymocyte proliferation by inducing IL-2 release, B-cell maturation and proliferation, and fibroblast growth factor activity. IL-1beta proteins are involved in the inflammatory response, being identified as endogenous pyrogens, and are reported to stimulate the release of prostaglandin and collagenase from synovial cells. IL-1 is a name that designates two pleiotropic cytokines, IL-1 alpha (IL1F1) and IL1 beta (IL1F2), which are the products of distinct genes. IL-1 alpha and IL-1 beta are structurally related polypeptides that share approximately 21% amino acid (aa) identity in human. Both proteins are produced by a wide variety of cells in response to inflammatory agents, infections, or microbial endotoxins. While IL-1 alpha and IL-1 beta are regulated independently, they bind to the same receptor and exert identical biological effects. The human IL-1 beta cDNA encodes a 269 aa precursor. A 116 aa propeptide is cleaved intracellularly by the cysteine protease IL-1 beta converting enzyme (Caspase1/ICE) to generate the active cytokine. The mature human IL-1 beta shares 96% aa sequence identity with rhesus and 67% 78% with canine, cotton rat, equine, feline, mouse, porcine, and rat IL-1 beta.

Uniprot ID:

[P01584](#)

NCBI:

[NP_000567.1](#)

GeneID:

[3553](#)

Species:

Human

Source:

E. coli

Format:

State: Lyophilized purified protein

Purity: >98% pure by SDS-PAGE and Silver stain

Buffer System: PBS

Stabilizers: None

Endotoxin Level: < 0.1 ng per µg (IEU/µg) of rh IL-1beta

Reconstitution: The lyophilized rh IL-1beta is soluble in water and most aqueous buffers.

The lyophilized powder can be restored in water to a concentration of 0.1 mg/ml. This solution can be diluted into other buffered solutions or stored at -20°C for future use.

Description:

Recombinant Human Interleukin-1beta produced in E.Coli is a non-glycosylated, Interleukin-1 beta Polypeptide chain containing 153 amino acids and having a molecular mass of 17.0 kDa.

Result by N-terminal sequencing: APVRSL and MAPVRS

AA Sequence:

APVRSLNCTLRDSQQKSLVMSGPYELKALHLQGQDMEQQVVFMSFVQGEESNDKIPVALGLKEKNLYLSCV
LKDDK
PTLQLESVDPKNYPKKKMEKRFVFNKIEINNKLFEESAQFPNWIYSTSQANMPVFLGGTKGGQDITDFTMQF
VSS

Biological Activity: Measured in a cell proliferation assay using murine D10G4.1 cells. The ED50 for this effect is typically 2-10 pg/ml.

Specific Activity: 2 x

Molecular weight: 17 kDa (153 amino acids)

Add. Information:

Range: 0.1-10.0 ng/ml

Storage:

Store lyophilized at RT for 3 weeks or (preferably in a desiccator) at -20°C for longer. Following reconstitution store the antibody undiluted at 2-8°C for one week or (in aliquots) at -20°C for longer.

For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA)

Avoid repeated freezing and thawing.

Shelf life: one year from despatch.
