

### Product information

**Product number:** IMS01-139-329

**Lot Number:** 080

**Clonality:** Polyclonal

**Raised in:** Hen

**Purity:** The IgY fraction is isolated by a two-step PEG precipitation procedure followed by ammonium sulphate precipitation. IgY fraction contains 0.9% NaCl, 0.1% NaN<sub>3</sub>.

**Quantity:** 200 µl

**Antibody form:** Liquid

**Storage instructions:** 4°C-8°C

Sodium azide is added to prevent bacterial growth when storing the product in 4°C.

*Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from liquid or lyophilized material adhering to the cap or sides of the tubes.*

### Background

Enterobacter cloacae is a gram negative, rod-shaped bacterium that has peritrichous flagella.

Enterobacter species, particularly Enterobacter cloacae, are important nosocomial pathogens responsible for a variety of infections, including bacteremia, lower respiratory tract infections, skin and soft tissue infections, urinary tract infections, endocarditis, intra abdominal infections, septic arthritis, osteomyelitis, and ophthalmic infections.

**Immunogen:** Whole formaldehyde killed bacteria

### Application information

**ELISA:** 1: 1 000
