## Recombinant Murine Interleukin-7

Alternate names: IL7

Catalog No.: PA1083X
Quantity: 10 μg

Background: Interleukin 7 (IL-7), which is constitutively produced particularly by stromal cells from the

bone marrow and thymus, plays a crucial role in T cell homeostasis. This cytokine is implicated in thymopoiesis since it sustains thymocyte proliferation and survival. It regulates peripheral naive T cell survival by modulating the expression of the anti-

apoptotic molecule Bcl-2, and sustains peripheral T cell expansion in response to antigenic stimulation. Infection by the human immunodeficiency virus (HIV) leads to severe T lymphopenia and general immune dysfunction. Increased IL-7 plasma levels are generally

observed in HIV-infected patients.

Species: Mouse Source: E. coli

Format: State: Lyophilized from a concentrated (1mg/ml) solution in water containing no additives

**Purity:** >98% Greater than 98.0% as determined by:

(a) Analysis by RP-HPLC.(b) Anion-exchange FPLC.

(c) Analysis by reducing and non-reducing SDS-PAGE Silver Stained gel

Recombinant Mouse IL-7 is purified by proprietary chromatographic techniques.

Endotoxin Level: Less than 0.1 ng/μg (IEU/μg) of Murine IL-7

Dimers: Less than 1% as determined by silver-stained SDS-PAGE gel analysis

**Reconstitution:** It is recommended to reconstitute the lyophilized Murine IL-7 in sterile 18MĎ?-cm H2O not less than 100  $\mu$ g/ml, which can then be further diluted to other

aqueous solutions.

**Description:** Recombinant Murine IL-7 produced in E. coli is a single, non-glycosylated polypeptide

chain containing 130 amino acids and having a molecular mass of 14897 Dalton.

AA Sequence:

The sequence of the first five N-terminal amino acids was determined and was

found to be Met-Glu-Cys-His-Ile.

**Biological Activity:** Murine IL-7 is fully biologically active when compared to standard. The ED50 as determined by the dose-dependant stimulation of murine 2E8 cells is < 0.2 ng/ml,

corresponding to a Specific Activity of 2 x 106 IU/mg.

Molecular weight: 15 kDa

Add. Information: Gene Name Il7

Protein synonyms/aliases: Interleukin-7 precursor (IL-7)

Protein Family: belongs to the IL-7/IL-9 family. Domains: IPR000226

Interleukin-7/interleukin-9

TUV HORD CERT CRIENT OF THE PARTY OF THE PAR

## PA1083X: Recombinant Murine Interleukin-7

## Storage:

Lyophilized Recombinant Murine IL-7 although stable at room temperature for 3 weeks, should be stored desiccated below -18°C. Upon reconstitution Recombinant Murine IL-7 should be stored at 4°C between 2-7 days and for future use below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please avoid freezethaw cycles. Shelf life: one year from despatch.
