

Mouse IL-12 (Interleukin-12) - Purified

Alternate names:	IL12
Catalog No.:	PA1089X
Quantity:	10 µg
Concentration:	1 mg/ml (prior to lyophil.)
Background:	IL-12 is a heterodimeric cytokine that stimulates the production of interferon gamma from T-cells and natural killer cells, and also induces differentiation of Th1 helper cells. It is an initiator of cell-mediated immunity.
Species:	Mouse
Source:	Insect cells
Format:	<p>State: Lyophilized</p> <p>Purity: >95.8% Purified by proprietary chromatographic techniques, sterile filtered purity > 95.0 % as determined by:</p> <p>(a) Analysis by RP-HPLC.</p> <p>(b) Analysis by SDS-PAGE.</p> <p>Reconstitution: Sterile 18MΩ-cm H2O not less than 100µg/ml, which can then be further diluted to other aqueous solutions.</p>
Description:	<p>Interleukin-12 Mouse Recombinant produced in Sf9 insect cells is a glycosylated disulfide linked heterodimeric polypeptide containing 506 amino acids.</p> <p>AA Sequence:</p> <p>The sequence of the first five N-terminal amino acids was determined and found to be Arg-Val-Ile-Pro-Val at the p35 subunit and Met-Thr-Glu-Leu-Glu at the p40 subunit.</p> <p>Biological Activity: The ED50 was determined by the stimulation of IFN-gamma production by murine splenocytes co-stimulated with IL-12 and was found to be < 0.1ng/ml, corresponding to a specific activity of > 1 x 10⁷ IU/mg.</p> <p>Molecular weight: 75 kDa 75 kDa comprised of disulfide-bonded 35 kDa (p35) and 40 kDa (p40) subunits.</p>
Storage:	<p>Lyophilized product is stable at room temperature for one month, should be stored desiccated below -20 °C. Upon reconstitution it should be stored at 2 - 8 °C up to one week and for future use below -20 °C. For long term storage it is recommended to add a carrier protein (0.1 % HSA or BSA). Avoid repeated freezing and thawing.</p> <p>Shelf life: one year from despatch.</p>
