Monoclonal Antibody to Hepatitis Delta Virus (HDV)

Catalog No.: PM1328
Quantity: 20 µg
Host / Isotype: Mouse / IgG
Immunogen: Recombinant hepatitis virus delta antigen (isolate TW2576), aa residues 4-10 (SESKRNR)

Format: This antibody is supplied in lyophilized form (from PBS), purified by ion exchange chromatography.

Reconstitute with sterile H₂O to get 1 mg/ml stock solution. Mix gently, wash the sides of the vial and wait 30-60 seconds before use. If a more dilute solution is required, it is suggested that they be made in a buffered solution containing carrier protein such as PBS with 0.1% BSA.

Applications: Immunofluorescence on frozen sections (1:200; 60 minutes primary antibody incubation at 25°C). Western blotting (1:500; 60 minutes primary antibody incubation at 25°C). Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.

Specificity: This antibody reacts with hepatitis virus delta antigen.

Storage: Lyophilized: store at 4°C. After reconstitution, if not used within a month, aliquot and store at -20°C. Shelf life: on
