R1316T Polyclonal Antibody to Ferret IgG, IgA and IgM [H&L] -TRITC-

Quantity: 1 mg

Concentration: 1.0 mg/ml (by UV absorbance at 280 nm)

Host: Goat

Immunogen: Ferret IgG, IgA, IgM whole molecules.

Format: State: Lyophilized purified Ig fraction.

Purification: Immunoaffinity chromatography.

Buffer System: 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 with 10 mg/ml Bovine Serum Albumin (BSA, IgG and Protease free) as stabilizer and 0.01%

(w/v) sodium azide as preservative.

Label: TRITC – Tetramethylrhodamine isothiocyanante (Molecular Weight 444 daltons)

Absorption / Emission: 550 nm / 570 nm

Molar Ratio: 2.9 moles TRITC per mole of Goat IgG.

Reconstitution: Restore with 1.0 ml of deionized water (or equivalent).

Applications: Suitable for Immunomicroscopy and Flow cytometry or FACS analysis as well as other

antibody based fluorescent assays requiring lot-to-lot consistency.

Other applications not tested. Optimal dilutions are dependent on conditions and

should be determined by the user.

Specificity: This product was prepared from monospecific antiserum by immunoaffinity

chromatography using Ferret antigens coupled to agarose beads followed by solid

phase adsorption(s) to remove any unwanted reactivities.

Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat

Serum.

This reagent is suitable for the detection of all Ferret immunoglobulin isotypes and

chain combinations.

Storage: Store vial at 2-8°C prior to restoration. For extended storage add glycerol to 50% and

then aliquot contents and freeze at -20°C or below. Centrifuge product if not

completely clear after standing at room temperature.

This antibody is stable for one month at 2-8°C as an undiluted liquid.

Dilute only prior to immediate use. Avoid repeated freezing and thawing. Shelf life: One year from despatch.

General Readings: J.A. Titus, et al. J. Immunol. Methods 50; 193, 1982. (Conjugation)
