Monoclonal Antibody to Histone H3 pSer10 - Aff - Purified

Alternate names: H3 Histone family, HIST1H3

Catalog No.: TA328045

Quantity: 0.1 mg

Concentration: 0.5 mg/ml

Background: H3 is a core component of the nucleosome that serves to wrap and compact DNA into

chromatin. Histories therefore, limit the accessibility of DNA, providing mechanisms for transcription regulation, DNA repair and replication and chromosomal stability. During

mitosis, H3 is phosphorylated at serine 28. This phosphorylation coincides with

chromosome condensation initiated at prophase and disappears at late anaphase H3 has been demonstrated to be phosphorylated by the action of MLTK- α (mixed linage kinase-like mitogen activated protein triple kinase α) in response to ultraviolet B light and epidermal

growth factor, as well as Aurora-B during mitosis.

Structure: H3 is part of the nucleosome, comprised of an octameric complex with H2A,

H2B, and H4 proteins. **Distribution:** Nucleus.

Function: H3 is a core component of the nucleosome that serves to wrap and compact DNA into chromatin. Histones therefore, limit the accessibility of DNA, providing mechanisms for transcription regulation, DNA repair and replication and chromosomal stability. **Regulation:** H3 is regulated by acetylation, methylation, citrullination, phosphorylation,

and ubiquitination.

Interaction: Two molecules of H3 form a heterotetramer with two molecules of H4.

Host / Isotype: Mouse / IgG2b

Clone: 11D8

Immunogen: Modified synthetic peptide conjugated to KLH

Format: State: Liquid purified IgG fraction

Purification: Antigen Affinity Chromatography

Buffer System: PBS, pH 7.2

Preservatives: 0.05% Sodium Azide

Applications: Western blot: Each lot of this antibody is quality control tested.

Recommended Dilutions: Use 1 µg per ml antibody dilution buffer for each mini-gel.

Immunofluorescence.

Other applications not tested. Optimal dilutions are dependent on conditions and should

be determined by the user.

Specificity: The 11D8 monoclonal antibody recognizes Human Histone H3-Phosphorylated (Ser10).

THE N ISO 965

TA328045: Monoclonal Antibody to Histone H3 pSer10 - Aff - Purified

Storage:

Store undiluted at 2-8°C.

DO NOT FREEZE!

Shelf life: one year from despatch.

Pictures:

293T cell extracts were resolved by electrophoresis, transferred to nitrocellulose, and probed with purified anti-H3-pS10 clone 11D8 antibody. Proteins were visualized using an antimouse IgG secondary conjugated to HRP and chemiluminescence detection. Lane 1, is inter phase 293T cell extract; lane 2, is M phase 293T cell extract (overnight nocodazole-treated cells).

Exponentially growing Hela cells were stained with purified phospor-Histone H3 (Ser10), clone 11D8 antibody, followed by Alexa Fluor® 488 conjugated to antimouse IgG and DAPI. The phosphor-Histone staining is specific on metaphase cells only.
